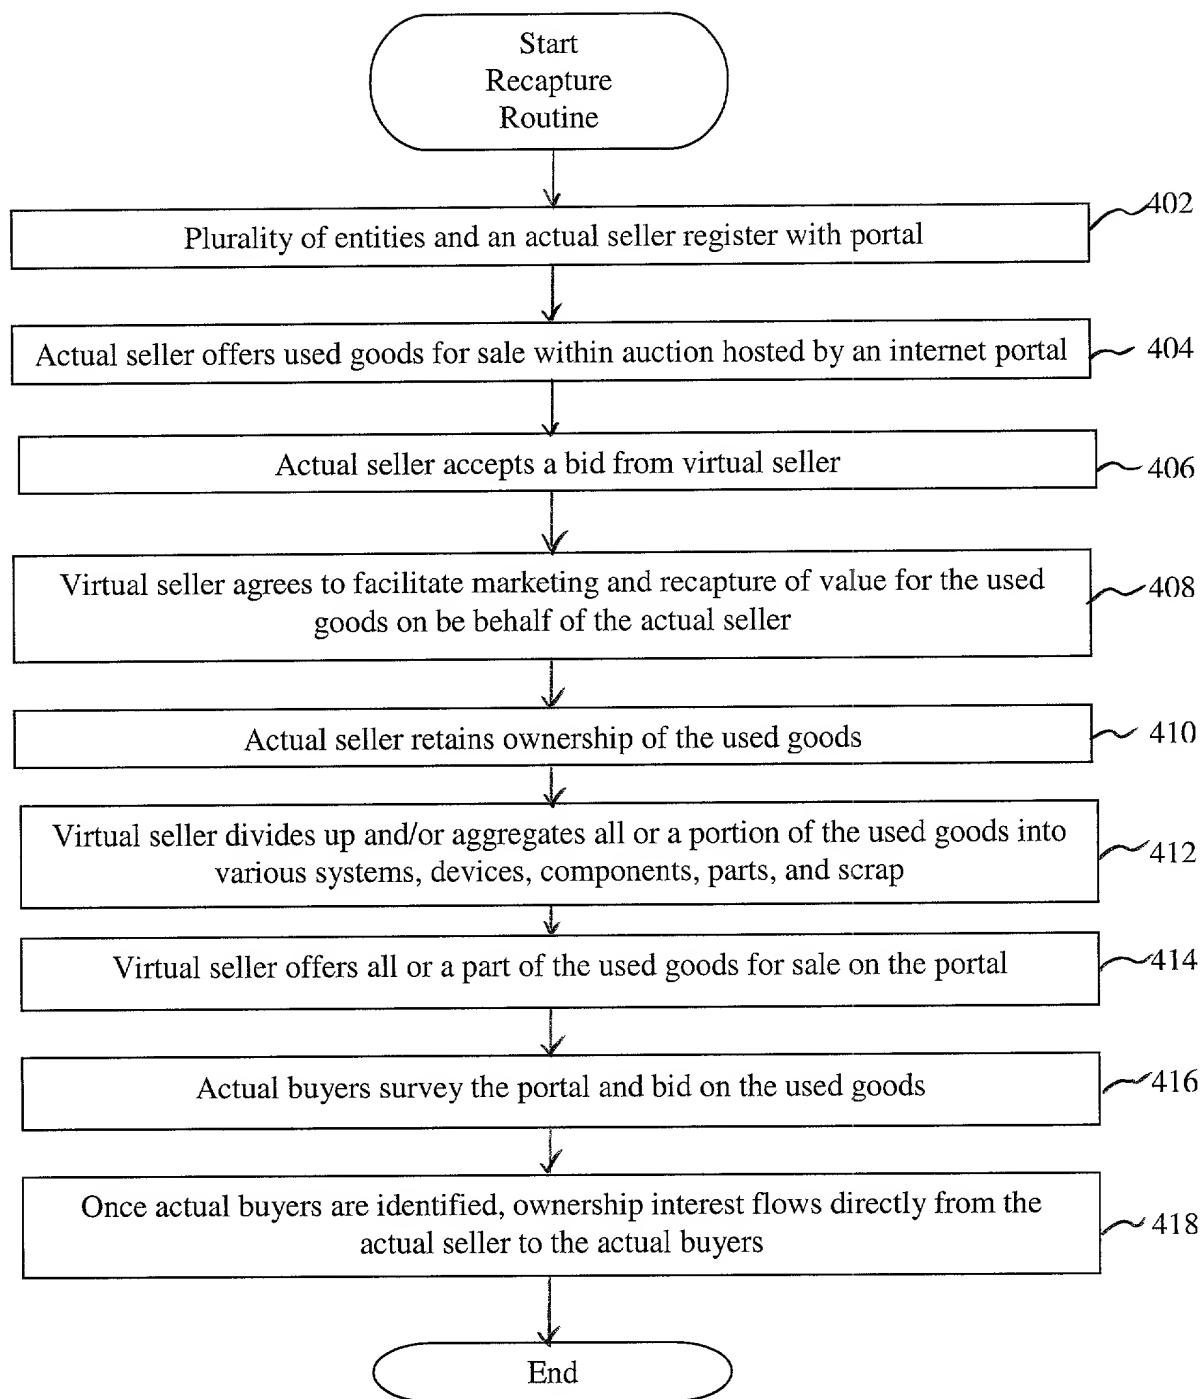

Fig. 4

FIG. 5 is a block diagram of an Internet Exchange Portal system. The system includes a Virtual Seller Services module (502), a Virtual Finance Services module (504), a Virtual Escrow Services module (506), and a Virtual Logistics Services module (508). These modules are interconnected with an Internet Exchange Portal (302). The system also includes Other Portals & Exchanges (510) which are connected to the Internet Exchange Portal (302).

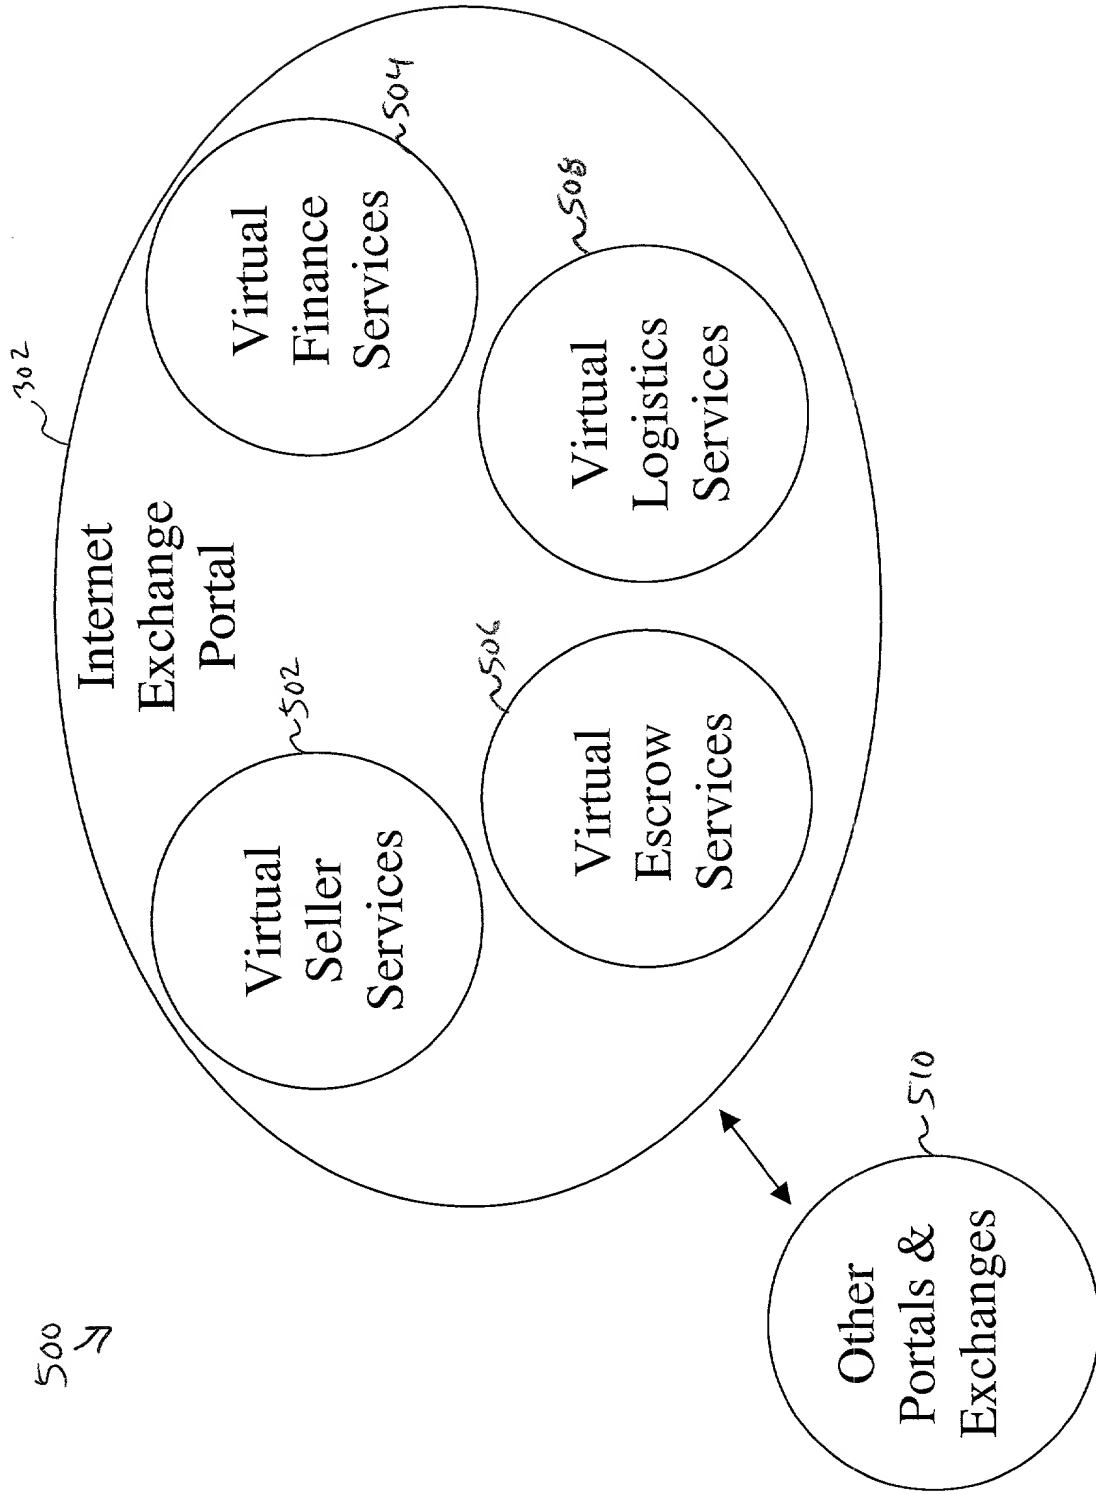

Figure 5

FIGURE 6. The Value Recaptured Model. The model shows the flow of goods from the initial condition of used goods (600) through various services (616, 618, 620) to the final condition of used goods (614). The services include Auction Services, Refurbishment Services, and Virtual Warranty. The final condition of used goods is categorized into Defective condition & Obsolete, Defective condition & Mixed marketability, Mixed condition & marketability, Excellent condition & Obsolete, and Excellent condition & Marketable.
